Ahmed Maher

Software Engineer

I'm a results-oriented, target specific, software enthusiast engineer with 5 years of experience in software development and can-do attitude, doing pretty much whatever I put my mind to is a matter of time that is reduced by proper teamwork, actively involved in the open-source community, looking for an opportunity that provides stability, career development where I can learn new technologies and add value. I'm capable of working individually or as a part of a team, well organized and trustworthy.

Projects

- **Swift watcher project** (a banking transactions validation switch):
  - Built APIs that send a copy of banking transactions to a central server.
  - Created a listener service that validates transactions against sanction/AML rules.
  - Designed & implemented a user interface for agents to validate malicious transactions violating swift. rules for further investigation and reporting.
  - Performed unit/load tests for system components to assert functionalities and performance metrics.
- **Generic configuration parser project**:
  - Designed and implemented a central parsing engine that digests the configuration files of PS department's solutions such as [Fawry Payment – Mobile wallet – visual Journal, ...etc.].
  - Created the user interface with authentication & authorization schemes for the support agents to control configuration parameters.
- **Fawry service client-side application project**:
  - Created the required wireframe along with various customer modifications.
  - Created the delivery scheme & performance metrics of the product.
  - Implemented the solution development/testing/deployment phases, documented using swagger.
- **Cisco AppDynamics APM** (Application Performance Monitoring) **project** in Saudi Arabia:
  - Performed solution customization/implementation/integration with core banking/exchange server.
  - Implemented various [role-policy-action] monitoring sets with associated reports and dashboards.
  - Performed a project scaling POC resulting in justifying the need for the hardware requirements resulting in IT division acceptance of the requested resources & equipment.
- **Truck tracking system project** for the storage department:
  - Created an android application that reports the trucks' location & drivers' personal information to a central server on real time basis.
  - Visualized the sent coordinates on the tracker application (Splunk Mint) with drivers' metadata.
- **News feed application project** for marketing department:
  - Created SharePoint web part that grabs the news feed in XML format from the company's official website then embeds it in an internal SharePoint blog for employees to like, comment and share its content.
- **Health care CRM project**:
  - Used best practices to customize the solution's backend/frontend according to the customer needs.
  - Developed custom modules, views extensions & web hooks for Sugar CRM.
- **Web application for online shopping (e-commerce)**:
  - Gathered requirements, designed, developed, tested, containerized, deployed and documented the UAT & production environments.
  - Assembled authentication module (registration/verification/login/password reset) &CSRF protection.
  - Developed dynamic admin panel for the business owner to (add/delete/modify) products/categories lists and to observe/deliver customers purchase requests.
  - Deployed image hosting service Integrated with flicker API with OAuth protocol authorization.
  - Implemented different user authorization workflow for both customers and sales agents.

Trainings & Courses

- **Jan 2020-Jun 2020:** AWS cloud DevOps nanodegree **by** "Udacity".
- **Mar 2020-Aug 2020:** AWS cloud developer nanodegree **by** "Udacity".
- **Jun 2019-Nov 2019:** Deep Learning nanodegree **by** Facebook AI team" Udacity"/NTL scholarship.
- **2018:** Cisco AppDynamics onsite training **by** "Cisco Systems in Dubai".
- **2018:** Splunk certified user & Splunk certified power user **by** "Splunk corporation".

Work Experience

- **Jul 2020-June 2021:** Senior software application engineer at Orange.
- **Jan 2019-Jun 2020:** Software engineer at DG-BI (a software house in Heliopolis).
- **Sep 2017-Dec 2018:** Business solutions system engineer at Barq (solutions integrator in Maadi).

Education

- **2013-2017**: BEng (electronics and Electrical Communication department), Cairo university.
  - **Grade**:73% (Good).
  - **Graduation project**: Decentralized wireless network node (DWNN) prototype, **grade**: (Excellent).
- **2011-2012**: El-Saedya Secondary school, **grade**:99.9%.

Skills

- **Programming languages**
  - Java [Experienced]
  - JavaScript [Experienced]
  - SQL [Experienced]
  - Python [Used]
  - C/C++/C# [Used]
  - NoSQL [Used]
- **Frameworks**
  - Spring Boot [Experienced]
  - Node.js [Experienced]
  - JPA/Hibernate [Experienced]
  - Junit [Experienced]
  - Angular.js [used]
  - HTML/CSS [Used]
  - Bootstrap [Used]
  - Ajax/jQuery [Used]
- **Architecture**
  - OOP/Data Structures/Algorithms
  - GraphQL
  - Micro services/Linux
  - Design patterns
  - ORM/TDD
  - Big data/Map reduce
  - Rest/Soap APIs
  - CI/CD
- **Tools**
  - VSCode/Eclipse/STS/IntelliJ
  - Spark/Hadoop/Kafka
  - Elastic search/ JMeter
  - Redis/Memcached
  - Docker/Kubernetes
  - Postman/SoapUI
  - RabbitMQ/JMS
  - Git/Jenkins
- **Self-learning**
  - Clean Code/Clean Coder
  - Clean Architecture
  - Clean Agile/code complete
  - Clean Craftsmanship
  - The Pragmatic Programmer
- **Languages**
  - Arabic (Native)
  - English (Fluent)
